ADAPTER CURBS

We don't make the RTU, We make the RTU Better!

1-800-341-3536 /Quotes@mgmproducts.com /Orders@mgmproducts.com

How do you build a better curb?

- Better Engineering Designs
- Build from heavy gauge steel
- Fully welded construction
- No field assembly required
- Heavy Zinc G90 Protection
- Protect welds with micro seal / cold zinc
- Offer unique options:
 - (Powder Coating / 1000 hr salt test)
 - (Slope correction curbs)
 - (Seismic and Wind Rated Curbs)
 - (Filter Sections / Zoning Dampers / Hot Water Coils)
 - (Safety Service Platforms)

Full internal insulation, glued and mechanically fastened

SA and RA labeled for easy I.D.

Top of curb includes factory spec'd deck pans

All welds cleaned and protected

Every curb has a 3" downturned flange

Every curb supplied with lift eyes

Always a sloped deck design (Never Box and Pan)

Every curb identified with an information tag

"I would rather explain the price, than apologize for the quality." Jimmy Dean

This design was adopted by most major curb manufacturers to compete on price!

***Picture is of a 3-5 ton size, larger units amplify the issues!*

- No identification tag
- Welds unprotected (???)
- No lift eyes (probably not necessary, curb comes in multiple pieces)
- Rusted pan will last for years before you worry about safety and water damage (???)
- Contractor is sure to use all supports and reinforce with 3/4" plywood (???)
- Lighter gauge material used in construction
- Lighter Zink Protection using G40 / G60 steel
- Who owns the liability for an incorrect assembly (???)
- Tube of caulk provided for all exposed seams (???)

The curb you provide is associated with your Brand Quality!

"HEY BOSS! - I'll be the first Service Tech to test this pan!"

How can I cut my price without compromising Quality or Service?
